

The CITY ABOVE The CITY

Ideas

In this design we have many spaces to re-create the social relations between residents and revive urban spaces. We have farms with different features on the roof to reduce air pollution, increase the visual qualities, create interaction between residents, and satisfy minor needs for each block in a world that population grows every day and we need lands for food production. We also assign different functions such as Agriculture farm, play ground, pool, market, etc, and bridges between the roofs.
