

CRIS-EXIT 2/4

During the decade preceding the economic crisis the city has grown to the north, creating two large areas of expansion, offices and housing, currently being unfinished. In the area of housing an anomaly arises because we detected a small isolated plot aimed to build an office block. This building was begun but was abandoned. This seems to us a challenge and the Project begins the work on it.

The plot is square 80x80 m with a 22x22 m square building in the center. The abandoned building structure consists of ground floor + 12 floors and the plot contains two floors of underground parking. The layout of the building is formed by a central core of reinforced concrete (elevator and stairs) and circular reinforced concrete pillars.
