

Naturally

In addition to residential and recreational functions The Foliage also creates new parks, community gardens for growing food and a great network of pathways for exploration and exercise

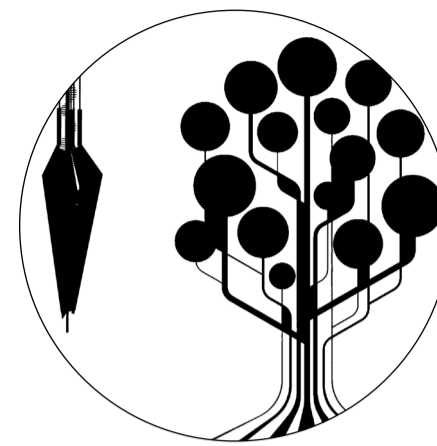

Plug In

The foliage will make use of the existing urban infrastructure for access, electricity and water.

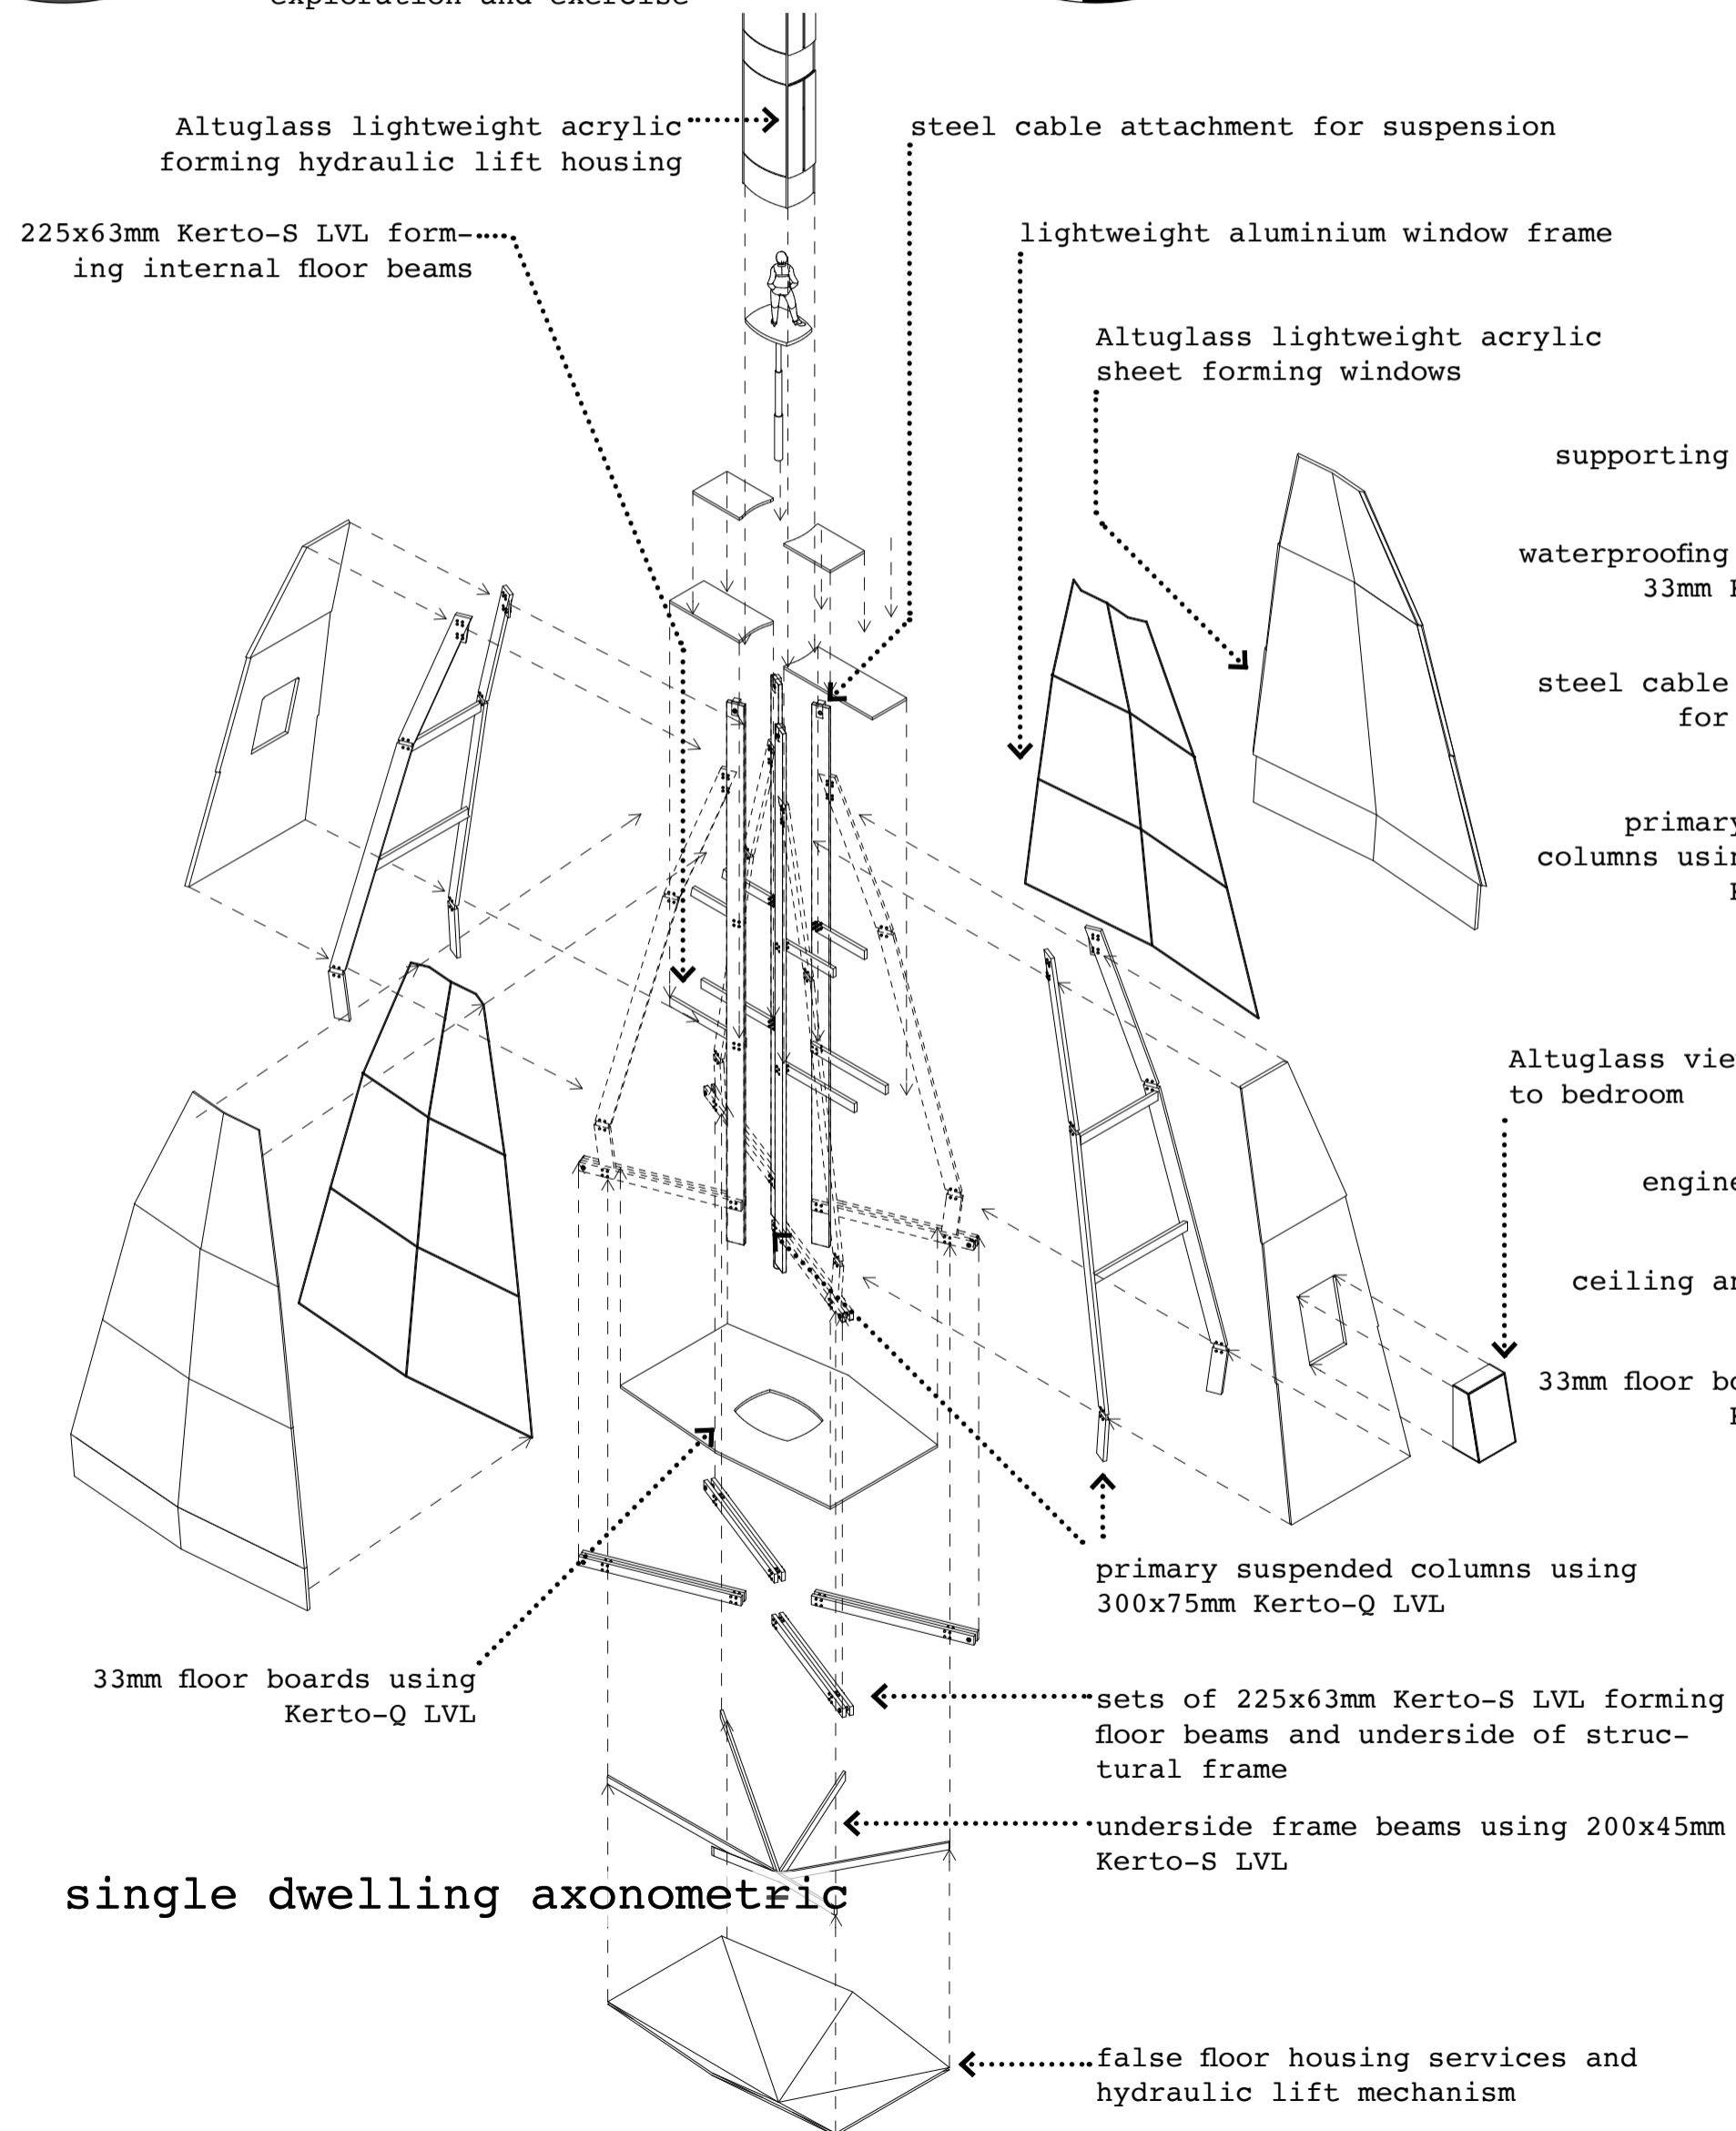

Grow. Slow

From the concrete 'trees' we extend bridges like branches and attach dwellings like nests. We only build what we need and allow The Foliage to develop as needed

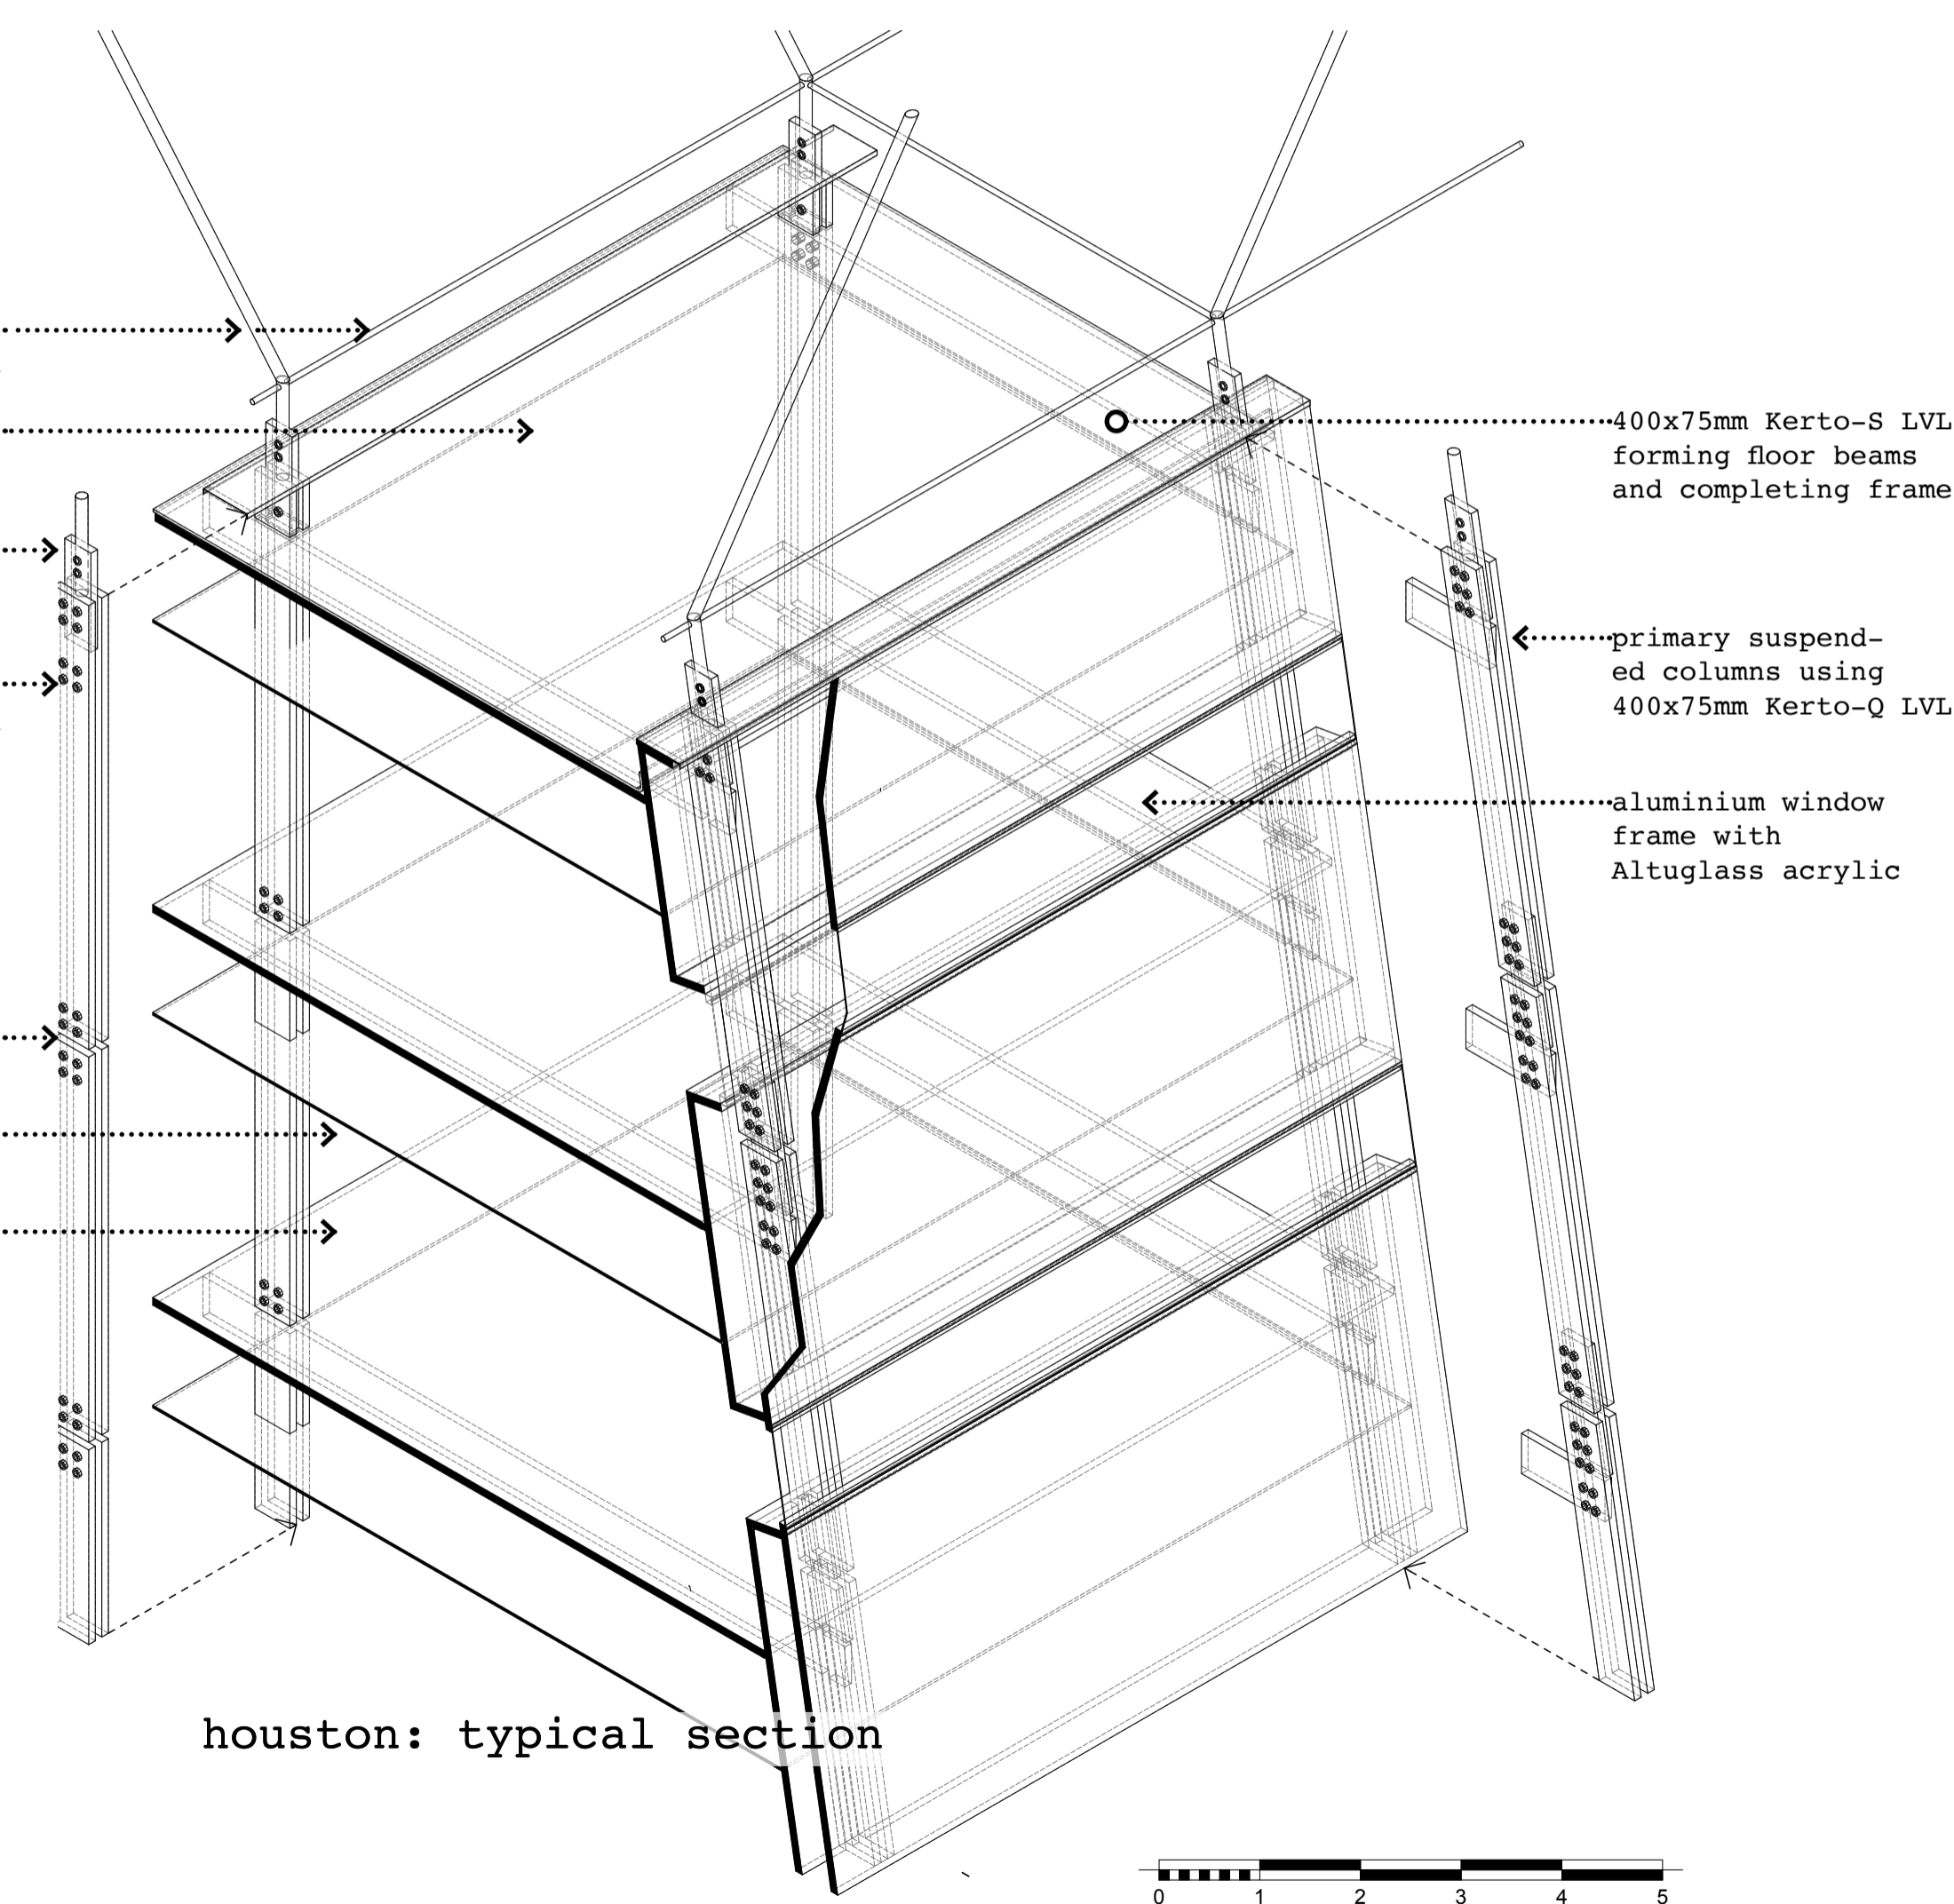

High Tech

We use timber for its two best characteristics; light weight and tensile strength and suspend an entire new city over the old

single dwelling axonometric

houston: typical section
