

### Lightness

The Urban Squatter Kit creates a space above city that is light because of its efficient use of laminated veneer lumber. The skin of the building is simply clad with a semi-translucent poly-carbonate sheets to allow more natural light into the space while providing privacy to the squatters.

### Bridge to Expand

Following the same structural and construction logic, the Urban Squatter Kit can be expanded into a bridge structure that is attached to an existing T-Beam to span to the adjacent roofscape for expansion of the site.
